

This plane originated in a U.S. Navy design contest for a Shipboard Single Seat Fighter in early 1938. The Corsair's designers aimed at the Pratt & Whitney Double Wasp engine, the V166 B design was approved, and a prototype built which was ready in early 1939. The Corsair was a true fighter, and the inverted gull wing gave adequate ground clearance while keeping the undercarriage length to a minimum. The Corsair was produced by the Lockheed Aircraft Corporation and U.S. Marine Squadrons used the Corsair from ground bases.
